

Novicom is the market leader in dynamic signage solutions for high schools, universities and other educational institutions. We help our customers communicate with their students so that these are always updated about the schedule of the day and other important messages from the school or university.

DIGITAL SIGNAGE for Education

Communicate with your students

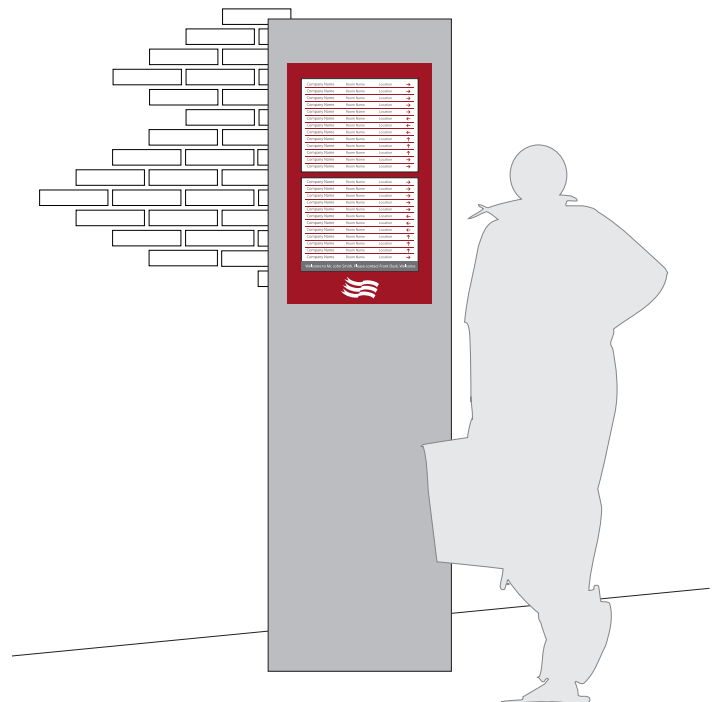

THE SCHEDULE HAS BEEN CHANGED!

The complex task of keeping the schedules for all classrooms updated becomes easy with a NOVICOM solution.

Overview signs are automatically updated when classrooms have been changed and will guide students to the right room. If students have already reached their classroom before the change was made, then they will meet a screen outside the classroom with the information – and they will know where to go.

THE TEACHER IS TRAPPED IN TRAFFIC!

The teacher has access to a message box on the screen outside the classroom that can be reached by any device with Internet access. He or she can easily send a message to the students. "Judy is trapped in traffic jam - I will arrive 10 minutes late".

NoviWall

The Built-in Architectural Digital Sign

The NoviWall is designed to sit flush with the wall surface and the glass cover can be customised with your logo and company colours.

NoviFlat

The Wall Mounted Architectural Digital Sign

The Novicom digital sign system includes a patented lock system, making it totally secure at all times.

INFORMATION TO YOUR STUDENTS CAN BE IMPROVED

All monitors can inform students about other activities, e.g. offers from the café, a special guest lecturer or other general information that needs to be distributed to a wider audience – the information can be displayed in combination with the schedule and other classroom information.

DO I NEED TO TYPE ALL THE DATA?
Yes and no – most of the data is presumably already stored in other systems and Novicom can reuse this information by making an automated data transfer - about teacher, room, class etc. Normally, the manually typed or loaded data is ad hoc information.

WAYFINDING BECOMES EASY
Wayfinding capabilities are a fundamental part of digital signage and are sure to enhance the visitor and student experience. Highly visible screens can be used to display directional signs as well as pictograms and other information designed to support navigation.
The navigational support is fully automated and can be used to direct visitors and students between any designated points in the building, without the need to ever update the system.

Large scale projects. Small scale projects.
The Novicom dynamic signage solution is modular and can be implemented as a single digital display and up to several hundred.
